

Workflow Optimization Total Assessment

Our multi-source approach delivers a comprehensive snapshot, providing clear visibility into the core areas of your business.

Approach

Total Corporate Solutions is California's number one and most respected consulting firm specializing in workflow optimization. We are specifically positioned to help your business understand asset deployment, usage patterns and exact cost breakdown. This revolutionary approach to business process evaluation and re-engineering can help you reduce costs, improve quality and increase efficiency. We design and review maps of how information flows within your organization, then we co-author a solution that improves the current infrastructure.

Our **Total Assessment** includes an integrated reporting tool that delivers actionable guidelines for complete alignment of all technology and business processes.

Identify

We begin by understanding company culture, strategic direction and corporate objectives. We IDENTIFY these with an analysis into the core areas required to achieve true optimization.

Measure

We MEASURE each one of these to ensure they align with the overall company culture. We do a physical walk through to help us create a snapshot of the current environment providing you with a complete visual of your operation.

Analyze

We ANALYZE by capturing situational data for all technology and assets using a non-invasive collection tool that retrieves information from both networked and non-networked assets.

Improve

We create blueprints on how information flows and we identify any bottlenecks or inefficiencies to IMPROVE the existing infrastructure.

Co-Author

We CO-AUTHOR solutions that sustain business processes and support these initiatives through on-going evaluations.

1. Understand Culture
2. Inventory Technology
3. Analyze Usage
4. Capture Costs
5. Preview Workflow
6. Examine Processes
7. Improve Carbon Footprint
